Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Salim Hayek, Pain Management: Dr.Aronson is not as aggressive or rapidly responsive as the average Anesthesiology resident in our department.
Resident Acknowledgement: Thank you - I will clarify with Dr Hayek - I'd like to better understand his comments -. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Kathleen Cho, Anesthesiology: There are things in your performance that need a some work. One, is preparedness for the cases – ie. getting a line ready, thinking ahead of what additional drugs & equipment you might need and getting them to the room (sheath for sonosite). Also, I felt that you should be more viligant toward your patient. While you were mentoring him, your CA1 partner gave a "maintenance" bolus of 2mg of dilaudid when it was not clinically indicated at all. Multiple times, I passed by the OR and you were in the corner of the OR on the telephone, without any view of the patient or your CA1 trainee. Neither of the cases (a carotid and a fem bypass) were manageable by the CA1 alone. I felt that rather than these being your cases (and clearly the level of the case dictates your level of training rather than a CA1), you were blase toward patient management and let your CA1 do whatever he thought was appropriate.

Resident Acknowledgement: muchas gracias -. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Lora Levin, Anesthesiology: Sarah did a really good job on call on Sunday. She worked incredibly hard and was able to work pretty independently when I had complex cases with the CA-1. Thorough patient care with good attention to details. Called for help and recognized potential problems appropriately.
Resident Acknowledgement: Busy day, learned lots, Dr. Levin is an good role model for prioritizing/multi-tasking while maintaining a diplomatic and professional demeanor -. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available

Confidential Comments: Comments visible to program director only
Program Director Comments: Comments Not Available

Lisa Hacker, Anesthesiology: I got the impression she does not quite understand some of the severity of complications in the ICU. For example, a patient who was diabetic and admitted after a left hemicolectomy due to an ischemic gut was left hyperglycemic for over 12 hours. This was not just her responsibility alone. I expect the nureses to come to the residents about these problems, but ultimately it is the physicians responsibility. We are a Surgical ICU, we need to optimize wound healing. Another example is a patient who was hyotensive secondary to bleeding, HCT turned out to be 17, taken back to the OR at night. The attending needs to be made aware of these issues.

Additional Comments:
Explanation for a score of 2 out of 5 for the interpersonal and Communication Skills: Many of her co residents complained that she did not carry her own weight and had to be told repeatedly to complete tasks. In a couple instances, even though she was given numerous chances, I was told she was too busy handling personal business and the other residents completed the work.
Explanation for a score of 2 out of 5 for the Patient Care: At at the level of a CA-2 1/2 at performing technical tasks. Struggled with a-lines, seemed very unfamiliar with placing an introducer.

Resident Acknowledgement: thank you. I acknowledge receipt of this evaluation.

Optional Confidential Comments

Aronson, Sarah (PGY - 2)

Lora Levin, Anesthesiology: I was really pleasantly suprised by how well Sarah worked on call. Still has a slower reaction than others, but provided excellent patient care.

Lisa Hacker, Anesthesiology: I've worked with interns that do a better job in the ICU. She seems to have a very difficult time completeing her thoughts. Technically, she did not know which kit was a Cordis kit or the components contained withlin. She also needed to be told the sequence of events step by step to do the line. Ulitmately, she was not able to cannulate the vein....but that was the least of my worries. Also, she was very unfamiliar with the PA waveforms.

Elias Leonruiz, Anesthesiology - General: Sometimes is difficult to become a resident after being an attending for a while.
And sometimes is difficult to know how much to instruct to a new resident/old attending. the instructing attending may prefer
to overdo with instructions rather than to miss one. Dr. Aronson should understand these problems and accept what
ocassionally may appear to her as too basic an instruction.
Resident Acknowledgement: Thank you, I agree, it can be a difficult balance to find. I acknowledge receipt of this
evaluation.

Carl Forrest, Anesthesiology - General: Good intubation skills. Kept chart up to date. Still learning routine in OR. Suggest: continue to read.
Resident Acknowledgement: Thank you - I'm always learning something when I work with you. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Douglas Graham, Anesthesiology - General: doing well. understands the physiology well. i would encourage the resident to try to limit PACU signout to less than 5 minutes... this will help with efficiency of turnover times (most places aim for a turnover time of 20 minutes.)
Resident Acknowledgement: Thanks - will work on that (-I appreciate that kind of specific info. I want to work on my efficiency, and it helps to know where I should be faster). I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Donald Voltz, Anesthesiology - General: Does a complete job with pre-op evaluations, and likes to think about a number of

potential scenarios. I appreciate her willingness to make a plan and has some desire to try new things, something that needs to be encouraged in other residents
Resident Acknowledgement: Thank you -. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

She performs better than most in her class.

Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Victoria Eskinazi, Anesthesiology - General: Very good critical thinking ability but needs to work on her sense of urgency
Resident Acknowledgement: thank you -. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Barbara Dabb, Anesthesiology - General: This was the first day of the rotation and I also do not know this resident. She did not do the work ups and I fromed the plans and explained ton her what we would do as she was unfamiliar with the cases. I did remind her to make a post op visit which I do not think she did as I saw no note

Additional Comments:
Explanation for a score of 2 out of 5 for the Patient Care: She placed an a line w/ some slight assistance but when I asked her to stat a second IV intra-op she ignored an easy vein twice and place the IV in a tortuous vein and of couse the IV did not last. She could not give a reasonable explanation for this.
Explanation for a score of 2 out of 5 for the Professionalism: *No comments provided*

Resident Acknowledgement: I made post-op rounds later in the evening on post-op day 1, I think probably 15 or 20 mins after Dr Dabb came through judging by the time of her chart note. We debated the IV issue at the time. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Lisa Hacker, Anesthesiology - General: Needs to be much more efficient. Pre-op not done even after a long delay between cases. Her interaction with the patient was great but if it is documented it doesn't really help, especially if the info obtained can't be recalled. Labs I felt were important to the case were not considered (HCT in a bleeding patient). I would have discussed these things after the 2nd case but she left without talking to me.

Additional Comments:
Explanation for a score of 2 out of 5 for the Medical Knowledge: Immediately reached for metoprolol to give to a patient who was tachycardic after induction who was brought to the OR for uncontrolled bleeding..and she didn't know the HCT. Last documented was 25 after 2 units PRBCs
Explanation for a score of 2 out of 5 for the Patient Care: Long delay between cases, she didn't start the 11a, after I was half way through I was called to my other room. I asked her to finish it but it was never done.

Resident Acknowledgement: agree I should have been writing as I was sorting out the details of this pt's complicated hospital stay from her chart. she was an add-on for whom we had little time to prepare, and I had the room ready for possible transfusion, possible need for a-line, etc. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Confidential Comments: Comments visible to program director only
Program Director Comments: Comments Not Available

Evan Goodman, Anesthesiology - General: Sarah continues to improve her regional anesthesia technique.
Resident Acknowledgement: Thank you - I valued my rotation on OB. I appreciate your support and committment to teaching. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Susan Dumas, Anesthesiology - General: Sarah had a slow start during this rotation. Although her epidural technique was average, her knowledge and her ability to perform quickly and proficiently in situations requiring fast action was not where it should have been after a month. An additional 2 weeks was suggested. I think that there was some difficulty taking what she knew from a knowledge standpoint and implementing it.

Additional Comments:
Explanation for a score of 2 out of 5 for the Medical Knowledge: see below
Explanation for a score of 2 out of 5 for the Medical Knowledge: see below
Explanation for a score of 2 out of 5 for the Medical Knowledge: Sarah took some time to complete the required 50 questions. Not sure how much OB anesthesia reading she was doing
Explanation for a score of 2 out of 5 for the Patient Care: several comments from attendings felt that attention to detail was lacking
Explanation for a score of 2 out of 5 for the Patient Care: needed to get more epidurals to become more proficient

Resident Acknowledgement: I would tend to disagree with several points. I completed the questions a week prior to their "due date", I read consistently, and while I tend not to demonstrate speed early on in acquiring new skills, I received positive feedback from other attendings regarding my technical ability as well as my clinical judgement. I didn't object to remaining on OB for the additional time because I enjoy working there and there is always more to learn. I made one significant medication error early on which I reviewed in depth with my attg of the day, but lack of attn to detail is not feedback I have otherwise received. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Jeffrey Grass, Anesthesiology - General: Off to a great start on OB. Great patient interaction skills. Continue to work on regional skills.
Resident Acknowledgement: thank you - I did my eval b/f we worked together later in the day, very good learning experience and dialogue. Look forward to working with Dr Grass. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Adam Haas, Anesthesiology - General: introductory day in mac house. Impressive initial skill in regional anesthesia. An earer learner
Resident Acknowledgement: Thanks - don't feel too impressive yet, but practice, practice -. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Jeffrey Grass, Anesthesiology - General: Good fund of medical knowledge. Concentrate on correct drug doses.
Resident Acknowledgement: I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Adam Haas, Anesthesiology - General: Dr. Aronson is still at the beginning of her residency, and most of her performance is appropriate for her level of training. There were 2 events that I feel necessary to call to your attention. The first was a drug error by a factor of 10. She added 0.5 mg of epinepherine to lidocaine for an epidural instead of 0.05 mg. (Given that the volume was 20 cc, it really should have been 0.1 mg to make 1:200,000, which also was an error on her part). Fortunately, she did accurately document the amount on the syringe. I revieved drug concentrations with her. The second event involved a PPTL, one day post partum in a 153 kg woman. It was done under spinal, and the patient began to have some discomfort. Dr. Aronson started a propofol infusion. I discussed with her my concerns about that approach with this particular patient, and tried to convey that while her demonstration of initiative is good, at this point in her training it would be better to call the attending to see how to proceed.

Additional Comments:
Explanation for a score of 2 out of 5 for the Medical Knowledge: see comment below

Resident Acknowledgement: Thank you - as above, we did discuss both (both clinical points I won't be forgetting). I acknowledge receipt of this evaluation.

Program Director Comments: Comments Not Available

Margaret Sedensky, Anesthesiology - General: Today was busy enough that I had to abandon Dr. Aronson more than I wanted during a few tough cases. She did a fine job. She was available and ready for all cases, performed a technically hard block, took suggestions well, etc. All in all a good day. Talked about various things that I would have done differently on some of the cases, but she took good care of her patients.
Resident Acknowledgement: Thank you! It was a very good learning day. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Lora Levin, Anesthesiology - General: Sarah was on the floor more today, but could still be more involved. Needs to keep reading and start thinking proactively. Not just let's do a CSE, but what drugs and how much.
Resident Acknowledgement: thanks. I acknowledge receipt of this evaluation.
Evaluator Acknowledgement: Comments Not Available

Raymond Graber, Anesthesiology - General: Dr Aronson was late today -- she assumed she was at MacHouse - had been sick the day before and hadn't bothered to check her room assignment. We therefore got in the room 20 mins late I believe. I reminded her that the schedule is emailed out everyday. The other thing she did that I didn't like is sedate a patient in preop hold with fentanyl rather than versed. The main goal of sedation is relaxation and amnesia. If a patient is not having pain in preop hold, I don't see the point of giving fentanyl at that point. Another thing that happened was that I was not paged for emergence for the first case. She stated she paged me - but I did not get a page.

Program Director Comments: Comments Not Available

Douglas Graham, Anesthesiology - General: we did three spine surgeries today, all of which were about equal in difficulty and appropriate for this resident's prior training. the resident doctor adequately acquired H&P information and documentation. peripheral IV placements were not a problem. our first case contained an unanticipated difficult airway, and we used a fiberoptic scope and Aintree intubating stylet to successfully intubate the patient. in my mind, the resident was allowed adequate time to manipulate the scope and "get a feel" for performing the intubating procedure, but ultimately we secured the airway together (this should *not* be viewed as a negative at this stage of the resident's training.) the resident did struggle slightly with direct laryngoscopy during the next two cases and required my assistance to intubate once. all three cases required prone positioning, and i felt that the resident did a great job monitoring vital pressure points (ie. eyes, nose, ears, neck.) turnover times between each case was on the long side (i believe i commented on this in a previous evaluation.) the time in between the first two cases was over 45 minutes, and the time between the last two cases was about 35 minutes. again, i'll encourage the resident to keep PACU signout to less than 5 minutes and "pick up the pace" with room setup. (ideally, the resident should be able to drop a patient off in PACU, setup for the next case, AND perform an H&P on the next patient while starting the IV in less than 20 minutes.) overall, i feel like the resident has a great understanding of the pathophysiology involved in each case, but needs to improve on: 1. becoming more efficient (start thinking a few steps ahead) 2. developing routines for repetitive aspects of the job (ie. prep for next case, monitor placements, PACU signout.) 3. keep practicing direct laryngoscopy skills. thanks.
Resident Acknowledgement: Thank you, I really appreciate the feedback - . I acknowledge receipt of this evaluation.

Program Director Comments: Comments Not Available

Barbara Dabb, Anesthesiology – General: We only did one epidural in a "normal-sized" woman; 5 attempts were made top insert the non-disposable Touhy but it was done carefully and the patient did not experience pain. She did not do the cursory exam of airway, heart, lungs or fill in that portion of the pre-op So it was difficult to judge skill level. She did tell Dr. Lewis and me about a patient from whom she removed an epidural catheter after noting that there were petechiae and excessive skin oozing. She then told us that a CBC was pending. I did not understand the logic of removing the epidural before checking the platelet count since it would be available shortly since she was clearly concerned about hemostasis.

Additional Comments:
Explanation for a score of 2 out of 5 for the Patient Care: *No comments provided*

Resident Acknowledgement: Can't agree with the above – the excessive oozing was noted after the cather was removed. I then mentioned this to the pt's RN who said that she had noted some petechiae on the pt's chest, more than she would consider typical after second stage labor (these had appeared following labor and were not present before). Given those two pieces of info, I made a point of notifying Dr Dabb and following up on the pt's pending platelet count. Had I ignored those findings and the potential implications I might agree with her assessment, but otherwise no. I acknowledge receipt of this evaluation.

Barbara Dabb, Anesthesiology - General: Did not complete the drug sheet for a controlled substance, Pentothal, that she used in the OR, so I got a complaint from pharmacy. In the middle of the night, we had 3 epidurals to do all at about the same time. She did not mention to me while we we struggling with the first one, that the second patient wanted only a female caregiver, so I asked the second residen, Dr. Neely to go to that room to get ready. As the door was open, he did not see the sign, and so ther was some comotion and aggitation on the part of the patient and family. Also, if I had known that fact, I would have Dr. Neely come to monitor case 1, and have dr. Aronson proceed to case 2
Resident Acknowledgement: Thank you. I acknowledge receipt of this evaluation.

Barbara Dabb, Anesthesiology - General: Dr. Aronson had some difficulty with IV placement and succeeded 1 out of 3 attempts. Although the IV's were not easy to place, she seemed to have more difficulty than residents on her same level. She needs more time than others to complete tasks--she was not "on-time" for the first case. She told me that she had some difficulty with LMA placement but she did place an LMA with me very satisfactorily on the first attempt. During the preparation of our first patient of the day, she behaved inappropriately for a resident and in a very confrontational manner in front of the patient and his wife. I asked her several time to cap off a failed IV catheter so that there would not be blood all over the place as the patient was hepatits C positive and also to re-tape the barely working IV that she did have in place (it was quite positional but at least adequate for induction of anesthesia). Thinking that she did not hear me as she did not do these things, I repeated my requests several times and in a louder voice. Shortly after we re-taped the IV, she put her hands on her hips (arms akimbo) and told me that I "was just going to have to change my tone". The body language was very clearly confrontational and since she is a psychiatrist, she is quite aware of that. When I commented on that, she told me that she didn't have any place to put her hands

Explanation for a score of 2 out of 5 for the Patient Care: See below

Resident Acknowledgement: I did confront Dr Dabb, one time off the bat, in the AM on what I feel is a disrespectful demeanor, which I felt I should address with her directly and immediately if I was to continue working with her. Her manner for the rest of that day and for the subsequent day during which we worked together was much improved, and I felt that we then had a much better working relationship, so from my perspective it was an effective interaction. She did not at any time express to me any further displeasure so I assumed we had reached an understanding, and I had an acceptable learning experience. I acknowledge receipt of this evaluation.

Evaluator Acknowledgement: Comments Not Available
Program Director Comments: Comments Not Available

Kathleen Cho, Anesthesiology - General: There are things in your performance that need a some work. One, is preparedness for the cases -- ie, getting a line ready, thinking ahead of what additional drugs & equipment you might need and getting them to the room (sheath for sonosite). Also, I felt that you should be more viligant toward your patient. While you were mentoring him, your CA1 partner gave a "maintenance" bolus of 2mg of dilaudid when it was not clinically indicated at all. Multiple times, I passed by the OR and you were in the corner of the OR on the telephone, without any view of the patient or your CA1 trainee. Neither of the cases (a carotid and a fem bypass) were manageable by the CA1 alone. I felt that rather than these being your cases (and clearly the level of the case dictates your level of training rather than a CA1), you were blase toward patient management and let your CA1 do whatever he thought was appropriate.

Lora Levin, Anesthesiology - General: Sarah did a really good job on call on Sunday. She worked incredibly hard and was
able to work pretty independently when I had complex cases with the CA-1. Thorough patient care with good attention to
details. Called for help and recognized potential problems appropriately.
Resident Acknowledgement: Busy day, learned lots, Dr. Levin is an good role model for prioritizing/multi-tasking while
maintaining a diplomatic and professional demeanor -. I acknowledge receipt of this evaluation.
